Who We Are

TMS Mechanical Services is a family-run business with over 20 years of experience in the M&E industry. We specialise in providing commercial and domestic gas services, including heating, boiler changes, unvented cylinders, power flushing, and general plumbing. We are Gas Safe Registered and all of our work is fully guaranteed.

We are committed to providing our customers with the highest quality of service at a competitive price. We offer a free no-obligation quote on all work, and we always strive to complete our jobs on time and to the highest standards.

We are proud to be a part of the Essex and London communities, and we are committed to providing our customers with the best possible service.

Approved Installers

At TMS, we believe that energy-efficient heating is the right choice. We supply and install the latest products available to help drive down heating bills.

We are approved installers for Ideal, Worcester Bosch, Baxi, Viessmann, Glow Worm and Vaillant boilers. All our boilers come with long guarantees for your peace of mind.

Why Choose Us?

Family-Run Team

As a local Essex-based, family-run company, we offer a personal and tailored service that puts the customer first.

On Call 24/7

Our team is available 7 days-a-week to help when emergencies happen. We are ready to stop leaks and blockages fast.

Quick Response

We answer your call quickly and resolve any issues properly. We have equipment in our vans to enable effective, first-time results that last.

Specialist Equipment

Our equipment inventory includes thermal imagery cameras and pipe-freezing machinery. Most local plumbers don't have these specialist tools, but we are equipped and ready.

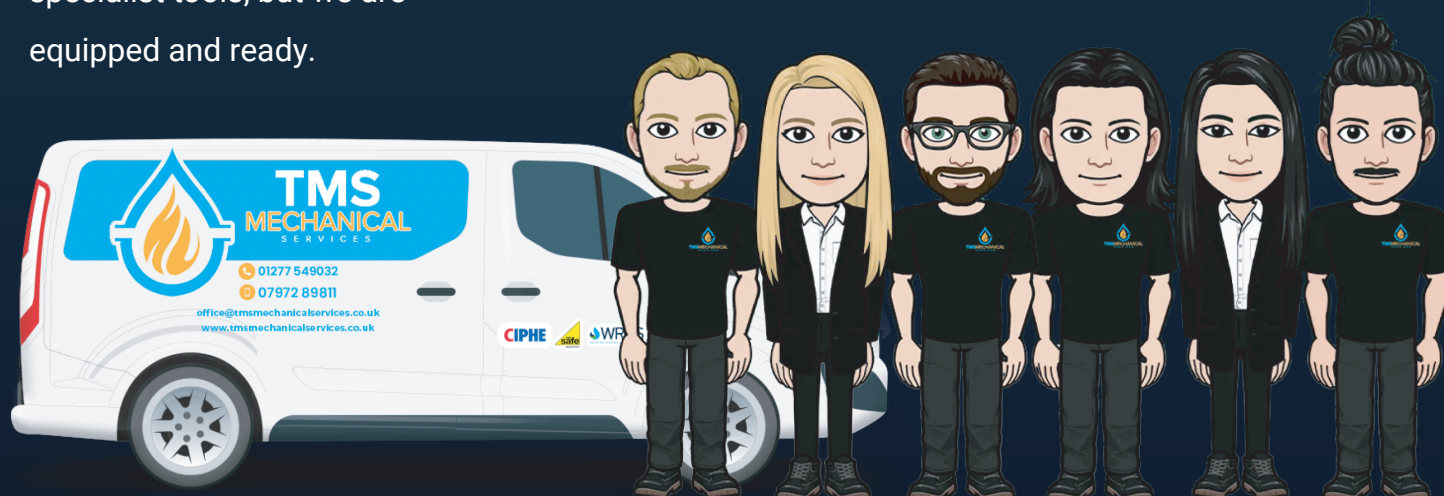

Experienced Gas Engineers

Our engineers have many years of working experience in the central heating and boiler industry, and we are Gas Safe registered.

Free Boiler Service

When you choose to have select boilers installed by us, the first annual service is free of charge. Ask us about our free boiler service offer.

Our Range Of Services

New Gas Boilers

Our Gas Safe engineers fit energy-efficient boilers to suit your budget. Trust us to fit the latest A-rated boilers from Ideal, Worcester Bosch, Baxi, Viessmann, Glow Worm and Vaillant. Our engineers have years of experience in the industry and stay up to date with the latest safety regulations to ensure that all gas work is completed safely and to the highest standards.

Heat pumps

Heat pumps are an efficient, eco-friendly solution for year-round comfort, offering both heating and cooling by transferring heat between your home and the outside environment. At TMS, we install state-of-the-art heat pump systems tailored to your home's unique needs. Our expertise ensures maximum energy efficiency and long-term savings, giving you a reliable and sustainable alternative to traditional heating systems.

Boiler Repairs & Servicing

If you're looking for a reliable and efficient boiler repairing service, we at TMS Mechanical Services are here to help. With our years of experience in the industry, we are well-equipped to handle any boiler repair job, big or small. Our team is known for a prompt and efficient service, ensuring that your boiler is up and running as soon as possible.

Unvented Cylinders

At TMS, we pride ourselves on our expertise in installing unvented cylinders, which are highly efficient and reliable hot water systems that provide high pressure hot water to all taps and showers in your property.

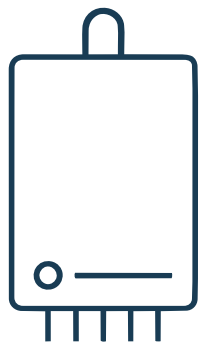

Powerflushing

TMS offers professional power flushing services to keep your central heating system running efficiently. Over time, heating systems can accumulate sludge, rust and other debris, which reduces efficiency and causes cold spots in radiators. Power flushing is an effective solution to remove these blockages and restore your system's performance.

Our Different Boiler Types

What Type of Boiler is Right for You?

Choosing a new boiler can feel overwhelming, especially with so many options available. We make the process simple by helping you understand the different types of boilers and which one best suits your home and lifestyle. The three main boiler types are combi boilers, system boilers, and conventional boilers – each offering unique advantages.

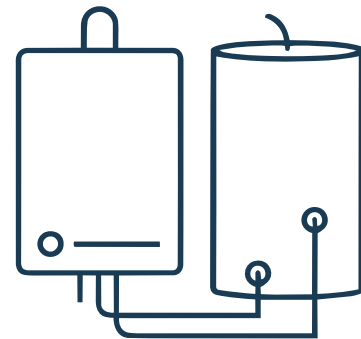

Combi Boilers

A combi boiler (short for “combination boiler”) is one of the most popular choices for modern homes. It provides both heating and instant hot water, without the need for separate water tanks.

Best for: Small to medium-sized homes where space is limited.

Benefits

- Compact design – fits neatly into a kitchen cupboard
- Instant hot water on demand
- No need for a hot water cylinder or cold water storage tank
- Energy-efficient, reducing running costs

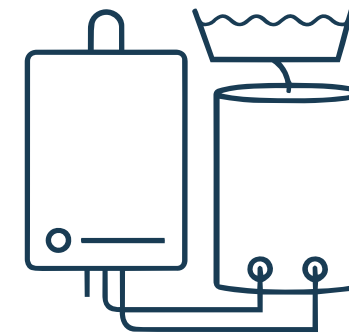

System Boilers

A system boiler works with a separate hot water cylinder but does not require a cold water storage tank. They are a great choice for households that use a lot of hot water, such as families with multiple bathrooms.

Best for: Medium to large homes with higher hot water demands.

Benefits

- Delivers hot water to multiple taps at the same time
- More efficient than older-style conventional boilers
- No need for a cold water storage tank in the loft
- Provides strong water pressure (depending on your mains supply)

Conventional Boilers

Also known as regular or heat-only boilers, conventional boilers use both a hot water cylinder and a cold water storage tank. While they take up more space, they are reliable and work well in larger properties with traditional heating systems.

Best for: Large homes or properties with existing traditional

Benefits

- Can supply hot water to several taps at once
- Compatible with older radiator systems and pipework
- Good option for homes in areas with low water pressure
- Suitable for larger properties with high water usage

Boiler Comparison at a Glance

Boiler Type	Best For	Advantages	Considerations
Combi Boiler	Small to medium homes with limited space	Compact, instant hot water, no tanks required	May struggle to supply multiple taps at once
System Boiler	Medium to large homes with higher hot water demand	Strong water flow, no loft tank, good for families	Requires space for a hot water cylinder
Conventional at Boiler	Large homes or those with older heating systems	Reliable for multiple taps, works with low pressure	Needs both a hot water cylinder and cold water tank, takes up more space

Which Boiler Should You Choose?

The right boiler for you will depend on the size of your home, the number of bathrooms, your hot water usage, and the space available for tanks or cylinders. Our qualified engineers will assess your property and recommend the most suitable boiler to meet your needs and budget.

What's Included With A New Boiler Installation?

At TMS Mechanical, we believe in complete transparency. When you choose us for your boiler installation, you'll know exactly what's included in the service – no hidden extras, no surprises. Every installation package is designed to give you the best performance, reliability, and long-term protection for your heating system.

Professional Installation

Your new boiler will be fitted by our fully qualified, accredited engineers. We ensure every installation is completed to the highest safety and efficiency standards.

Essentials We Include

Magnetic Filter

A magnetic filter attracts magnetite and sludge as it passes through your heating system. This filter protects your investment and increases the energy efficiency of your new system.

Limescale Reducer

Your limescale reducer will be connected to the cold water mains and reduce the risk of deposit build-up within your boiler. This will improve efficiency and prolong the life of your boiler. A must for hard water areas.

Waste Collection Service

We strive to deliver the best installations using our market-leading products and controls, but Caring for our environment is also important to us. Therefore, we remove all waste efficiently and correctly leaving you reassured..

Full Powerflush

- Improved efficiency - removes sludge & debris
- Extended lifespan - prevents corrosion
- Better heat distribution - eliminates cold spots
- Reduced noise - stops banging & gurgling
- Enhanced comfort - consistent heating
- Prevention of future issues before they

What is a Smart Thermostat, and Do You Need One?

Heating technology has come a long way, and one of the most useful upgrades for your home is the smart thermostat. Unlike traditional thermostats, which simply turn your heating on and off at set times, a smart thermostat gives you greater control, flexibility and efficiency. When we install your new boiler, we can include a smart thermostat, most commonly a Hive control.

What is a Smart Thermostat?

A smart thermostat is a device that connects your heating system to your Wi-Fi, allowing you to manage your heating from your smartphone, tablet or computer. Many smart thermostats also “learn” your routine, adjusting automatically to save energy while keeping your home comfortable.

Why Consider a Smart Thermostat?

- Control from Anywhere – Adjust your heating remotely using a simple app.
- Save Energy, Save Money – Prevent wasted heating when you're out, and reduce your energy bills.
- Custom Schedules – Create heating plans that match your lifestyle, so your home is warm when you need it most.
- Voice Control Options – Many systems work with Alexa, Google Home, or other smart devices.
- Monitor Your Usage – See how much energy you're using and where you can cut back.

Thermostats We Provide

ESI Programmable

- Delayed Start
- Landlord service reminder
- Easy to use

Hive

- Frost Protection
- Smart Control & Schedules
- Smart Energy Management

Quotation

What Happens Next?

01. Accept Your Quote

Once you are happy with the quote, you can let us know you're happy to go ahead. Either call us or drop us an email.

02. Choose an Installation Date

Choose a date that suits you and your family.

03. We Install Your Boiler

We will install the boiler you have chosen on the date you have specified. When the installation has been completed, you will be shown how to operate your brand new boiler.

04. Aftercare Service

Should you experience any problems with your new boiler, we will return promptly to put things right. And of course, we will see you next year for your annual boiler service!

Frequently Asked Questions

How long does installation take?

Most installations are completed within 2–3 days.

Can you install my boiler in a different place to the old boiler?

Yes we can, if your existing boiler is no longer in a convenient location, we can install the new one in a different place, but we must adhere to certain safety regulations. We will discuss possible places to relocate your boiler after a survey of your property.

Do you take away the old boiler?

Yes, we remove all the old components when we leave and dispose of them properly.

How long will my new boiler last?

With regular servicing and proper care, most modern boilers last between 10–15 years.

Do you offer finance?

Yes, we provide flexible finance plans to make your new boiler more affordable.

How often should I service my boiler?

We recommend a service every 12 months to keep your boiler safe, efficient, and under warranty.
